

OLD MUTUAL MONEY MARKET FUND

MARCH 2020

FUND INFORMATION

RISK PROFILE

Low	Low to Moderate	Moderate	Moderate to High	High
-----	-----------------	----------	------------------	------

RECOMMENDED MINIMUM INVESTMENT TERM

1 year+	3 years+	5 years+
---------	----------	----------

FUND OBJECTIVE

The fund aims to deliver a regular income and to outperform bank deposits over time, while preserving capital. The fund has never experienced a negative return over any calendar month since inception.

WHO IS THIS FUND FOR?

This fund is suited to investors who want a liquid investment that delivers a regular income and/or maximum capital protection, but who understand that their investment is unlikely to keep pace with inflation if held in the long term.

INVESTMENT MANDATE

The fund invests in money market securities with a maturity of less than 13 months. The fund's average maturity may not exceed 90 days.

REGULATION 28 COMPLIANCE

The fund is not required to be Regulation 28 compliant in terms of its Deed, but the fund manager is mandated to comply with Regulation 28 on a day-to-day basis.

FUND COMMENTARY as at 31/03/2020

The beginning of the quarter saw a drop in money market rates. This was due to the low growth and benign inflation outlook, which were key factors in the SA Reserve Bank (SARB)'s decision to cut the repo rate by 0.25% in January. Following this, the adverse effects of COVID-19 further prompted the Reserve Bank to cut interest rates, this time by a substantial 1% in March, to stimulate economic growth domestically. Given the negative impact of COVID-19 on world economies, central banks worldwide are beginning to reduce their leading rates, which is also pointing to a further drop in local interest rates. That said, the forward rate agreement (FRA) curve is currently pricing in a further 0.5% rate cut

over the next year, with the spread between 12-month and three-month JIBAR now at just over 0.6%.

We are mindful of the threats to the local economy and potential future rate cuts that may transpire over the coming months. As such our preference would be for fixed rate securities, which we would look to purchase at spreads that we believe are appropriate for the risk being taken. However, we continue to be buyers of longer-dated floating rate assets as these instruments help in managing the interest rate risk while also ensuring a healthy running yield for the fund.

OTHER INVESTMENT CONSIDERATIONS

MINIMUM INVESTMENTS:

- Monthly: R250
- Lump sum: R250
- Ad hoc: R250

INITIAL CHARGES (All fees are VAT inclusive):

There is no initial administration charge.

ONGOING

	Class A7
Annual service fees (excl. VAT)	0.50%
The fee is accrued daily and paid to the management company on a monthly basis. Other charges incurred by the fund, and deducted from its portfolio, are included in the TER. A portion of Old Mutual Unit Trusts' annual service fees may be paid to administration platforms.	

TAX REFERENCE NUMBER: 9007/027/60/1

ISIN CODES: Class A7 ZAE000020749

	36 Months	12 Months
	Class A7	Class A7
Total Expenses (Incl. Annual Service Fee) (31/03/2020)	0.58%	0.59%
Total Expense Ratio (TER)	-	-
Transaction Cost (TC)	0.58%	0.59%
Total Investment Charge		

TER is a historic measure of the impact the deduction of management and operating costs has on a fund's value. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER, which includes the annual service fee, may not necessarily be an accurate indication of future TERs. Transaction Cost (TC) is a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

We aim to treat our clients fairly by giving you the information you need in as simple a way as possible, to enable you to make informed decisions about your investments.

- You should ideally see unit trusts as a medium- to long-term investment. The fluctuations of particular investment strategies affect how a fund performs. Your fund value may go up or down. Therefore, we cannot guarantee the investment capital or return of your investment. How a fund has performed in the past does not necessarily indicate how it will perform in the future.
- The fund fees and costs that we charge for managing your investment are disclosed in the relevant fund's Minimum Disclosure Document (MDD) on www.22seven.com.
- Our cut-off time for client instructions (e.g. buying and selling) is at 15:00 each working day for all our funds. These are also the times we value our funds to determine the daily ruling price (other than at month-end when we value the Old Mutual Index Funds at 17:00 close). Daily prices are available on the Old Mutual Unit Trusts public website and in the media.
- Unit trusts are traded at ruling prices, may borrow to fund client disinvestments and may engage in scrip lending. The daily ruling price is based on the current market value of the fund's assets plus income minus expenses (NAV of the portfolio) divided by the number of units on issue.
- This fund holds assets in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information.
- A money market fund is not a bank deposit account. Its unit price aims to be constant but investment capital is not guaranteed. The total return is primarily made up of interest (declared daily at 13:00) but may also include any gain/loss on any particular instrument. In most cases this will merely have the effect of increasing or decreasing the daily yield, but in the case of abnormal losses, it can have the effect of reducing the capital value of the fund. The published yield is calculated using the average of the fund's previous seven days' net income (and assumes all income was reinvested). This figure is then annualised, which is the weighted average compound growth rate. Excessive withdrawals from the fund may place the fund under liquidity pressures. In such circumstances a process of ring-fencing of withdrawal instructions and managed payouts over time may be followed.
- The Net Asset Value to Net Asset Value figures are used for the performance calculations. The performance quoted is for a lump sum investment. The performance calculation includes income distributions prior to the deduction of taxes and distributions are reinvested on the ex-dividend date. Performances may differ as a result of actual initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Annualised returns are the weighted average compound growth rates over the performance period measured. Performances are in ZAR and as at 31 March 2020.
